Nagar Yuwak Shikshan Sanstha's
Yeshwantrao Chavan College of Engineering
(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)
Hingna Road, Wanadongri, Nagpur - 441 110
NAAC A++
Ph.: 07104-237919, 234623, 329249, 329250 Fax: 07104-232376, Website: www.ycce.edu
Department of Computer Technology

Vision of the Department

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering: Dynamic learning environment that encourages problem-solving using emerging technology, · National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry–institute collaboration, Holistic, ethical and sustainable development for lifelong success.

Session 2026-2027(ODD)

Vision: Dream of where you want.	**Mission:** Means to achieve Vision

Program Educational Objectives of the program (PEO): (broad statements that describe the professional and career accomplishments)

PEO1	**Preparation**	**P: Preparation**	**Pep-CL abbreviation pronounce as Pep-si-lL easy to recall**
PEO2	**Core Competence**	**E: Environment (Learning Environment)**	
PEO3	**Breadth**	**P: Professionalism**	
PEO4	**Professionalism**	**C: Core Competence**	
PEO5	**Learning Environment**	**L: Breadth (Learning in diverse areas)**	

Program Outcomes (PO): (statements that describe what a student should be able to do and know by the end of a program)

Keywords of POs:
Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

PSO Keywords: Cutting edge technologies, Research

"I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life." *to contribute to the development of cutting-edge technologies and Research*.

Integrity: I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

Srushti Chaudhari

Vision of the Department

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering: Dynamic learning environment that encourages problem-solving using emerging technology, · National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry–institute collaboration, Holistic, ethical and sustainable development for lifelong success.

Session	**2026-27 (ODD)**	**Course Name**	**LAB: Software Engineering**
Semester	**7th**	**Course Code**	**23CT1704**
Roll No	**24**	**Name of Student**	**Srushti Chaudhari**

Practical Number	**2**
Course Outcome	Upon successful completion of the course the students will be able to; 1. Choose appropriate software engineering process model, requirement engineering principles and software designing fundamentals for a given project. 2. Select appropriate testing strategy and apply testing principles for testing a given application. 3. Apply basics of software configuration management, version control and change control in software development. 4. Evaluate cost estimation, effort and severity of software risk for given application. 5. Perform basic operations on Sub-version for software version control.
Aim	To study and create Software Requirement Specification document for the given case study
Problem Definition	To analyze the requirements of a **Women Safety Alert System** and prepare a Software Requirement Specification (SRS) document defining its functional and non-functional requirements. The system is designed to provide women with a quick and reliable mechanism to send emergency alerts, share their live location, notify emergency contacts, and obtain assistance during unsafe situations.
Theory (100 words)	**Software Requirement Specification (SRS)** is a formal document that describes the requirements, functionality, constraints, and expected behavior of a software system. It acts as a communication document between users, customers, developers, testers, and other stakeholders. An SRS generally contains the system's purpose, scope, functional requirements, non-functional requirements, external interfaces, assumptions, constraints, and system features. For the Women Safety Alert System, the SRS defines features such as user registration, authentication, SOS alert generation, live location sharing, emergency-contact

Vision of the Department

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering: Dynamic learning environment that encourages problem-solving using emerging technology, · National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry–institute collaboration, Holistic, ethical and sustainable development for lifelong success.

	notification, alert history, and emergency-service communication. Preparing an SRS before development helps eliminate ambiguity, provides a clear development plan, and makes system testing and validation easier.
Procedure and Execution (100 Words)	Algorithm(Steps): **Step 1: Start.** **Step 2: Study the Women Safety Alert System case study.** **Step 3: Identify system stakeholders and actors:** • **Woman/User** • **Emergency Contact/Guardian** • **Police/Emergency Service** • **Administrator** **Step 4: Identify the major system functions.** **Step 5: Define functional requirements.** **Step 6: Define non-functional requirements.** **Step 7: Define system inputs, outputs, constraints, and assumptions.** **Step 8: Prepare the SRS document.** **Step 9: Create UML diagrams in StarUML.** **Step 10: Verify the requirements and diagrams.** **Step 11: Save the SRS document and UML models.** **Step 12: Stop.**
	Code: **Not Applicable – This practical involves requirements analysis and SRS documentation.**
	Output: Software Requirement Specification document for the Women Safety Alert System was successfully created.
Output Analysis	The SRS defines the functional and non-functional requirements, system scope, stakeholders, interfaces, constraints, and expected behavior of the Women Safety Alert System. It provides a clear foundation for system design, implementation, and testing.
